2021 Annual Drinking Water Quality Report Mud Creek Water Association PWS#: 0580020, 0580021 & 0730026 June 2022

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Ripley Formation & Eutaw - McShan Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Mud Creek Water Association have received moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Earl Johnson at 662.489.6851. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our meeting. Please call for date, time & location.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

^{*} Most recent sample. No sample required for 2021.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk, More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800,426,4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Mud Creek Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

EXCEL community service project benefits cancer patients, research

For their end-of-the-year community service project, the New Albany Elementary School's 5th grade EVCEL students deslyand and painted chairs, tables, and strob-that were sold at auction raising a total of \$1,800. The project's goal was to benefit a chairly or canuminity member in need, Punds raised were divided between two beneficiaries: \$8. bode Children's Research Foundation in hutur of Madison Hardy, a survi-vor of childhood cancer, and NASs teacher, Cashe Cook, who is currently battling cancer.

There's still time to register for ICC July orientation

It is not too late to register for July orientation sessions that are scheduled for both the Fulton and Tupelo campuses of Itawambs — Community College.

They include July 19 at 1 p.m. and July 21 at 8:30 a.m. at the Fulton Campus and July 21 at 5 p.m. at the Tupelo

at 5 p.m. at the Tupelo Campus. Recent high school graduates are required to participate in one of the sessions; however, they can attend regardless of

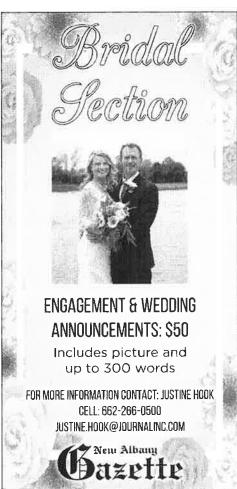

the location where they plan to enroll in classes. All students, including adult learners, are invired.

Annung the advantages of attending an urientation session are scheduling classes early and choosing from a wide variety of options, including slays, times and instructors. Participants will have an opportunity to connect with other new students as well as to learn more about student iffe at ICC. The sessions

will also enable adult learners to meet with an adviser and to make the transition to college less individuality. Prior to registration, students must have submitted an application for admission.

To register, students should access http://vwww.iccms.edu/Orientation.

For more information, call (662) 862-8000 or email orientation@iccms. edu.

a long time/ Remember his family, Subscribe with us TODAY!

We cooks asked the men-folks in our family what they wanted for dinner on Fathers' Day, That's the only day they get a choice. They decided on breakfast, So we proceed-ed to cook after church. I fig-ured most of the greatgrands would wont to help, but most of them jine disappeared. A. II. helped with the biscuits and fack stirred up the choe-olate gravy. When we got insugh eating, all we could do was moun and take a map! I don't know how we used to go to the fields and work after eating a meal like that, It sure was good, though.

2022-2023 NOTICE OF PROPOSED AD **VALOREM TAX EFFORT PONTOTOC** COUNTY SCHOOL DISTRICT

The Pontotoc County School District will hold a public hearing on its proposed school district budget for fiscal year 2022-2023 on Tuesday. July 19, 2022, at 5:15 PM. at the Pontotoc County Career and Technology Center, 354 Center Ridge Drive, Pontotoc, MS 38863. At this meeting, a proposed ad valorem tax effort will be considered.

The Pontotoc County School District in now operating with projected total budget revenue of \$22,775,984. Of that amount, 23 percent or \$5,085,759 of such revenue is obtained through ad valorem taxes. For the next fiscal year, the proposed budget has total projected revenue of \$26,341,342. Of that amount, 21 percent or \$5,413,906 is proposed to be financed through a total ad valorem tax levy.

For the next fiscal year, the proposed increase in ad valorem tax effort by Pontotoc County School District may result in an increase in the ad valorem tax millage rate. Ad valorem taxes are paid on homes, automobile tags, business fixtures and equipment, and rental real property.

Any citizen of Pontotoc County School District is invited to attend this public hearing on the proposed ad valorem tax effort, and will be allowed to speak for a reasonable amount of time and offer tangible evidence before any vote is taken.
